Usefulness of the Owl.

"Can there be any possible harm in killing owls for women's hats?" exclaimed a New York milliner to a member of the Audubon Society the other day. "Of what use are the horrid creatures to anybody?"

The pretty milliner was quite surprised when told that owls were very useful birds. Owls eat the field mice and other small rodents that work great injury to the farmer, and every one that is lost not only means a menace to the farmers, but a distinct loss to agriculture.

Dr. C. Hart Merriam, ornithologist of the United States Department of Agriculture, has estimated that in offering a bounty on owls and hawks. which resulted in the killing of more than 100,000, the State of Pennsylvania sustained a loss of nearly \$5, 000,000 in one year and a half.—Boston Globe.

Accidents and Hearing.

Professor Burkner, in his lectures in the clinic for ear diseases at Gottingen recently, referring to the numerous railroad accident that have occurred in Germany of late, said that it is probable that many were due to imperfect hearing on the part of railroad employes. While large classes of employes have their vision tested periodically, and often also their hearing, yet deficiencies in hearing capacity occur among them frequently which are not detected by these examinations. Many who suppose their hearings to be be perfectly good, by careful testing are found to have very serious defects. By reason of this general self-deception, no faith should be put in a man's own statement that he hears well with both ears.

The practical investigation of the sense of hearing demands such a mastery of the various methods used as can hardly be required from the ordinary physician. The professor said a great part of the trainmen, and particularly of the enginemen, after a relatively short term of service, no longer possess normal hearing, though many of them may still be fit for service. An adequate acuteness of hearing is of the greatest importance, not only among trainmen, but track guards and switchmen; these and others should have good hearing in both ears. A man hard of hearing in one ear has great difficulty in determining from what direction a sound comes. The safety of travelers and of the employes themselves, said the professor, requires that far more attention be paid to the ears of railroad men

· The Increase of Homes.

One of the best possible faction the latter-day progress of this country is the increase in the number of homes. In crowded centers of population, such as New York and one or two other cities, the flat and the hotel must always be necessary, for space is too valuable to be monopolized by the humble. But even around the very large cities there are being built thousands and thousands of suburban cot-Hood's Sarsa-tages and country residences, and all through the length and breadth of the country, in the towns, villages and cities, artistic homes are increasing at tages and country residences, and all lood's Pills cure all liver ills. 25 cents. an astonishing rate. If any one will take the trouble to look up the literature on the subject he will find that in this country there are more than a hundred papers devoted to these home builders, giving them each week plans and suggestions. The number of books upon low-priced architecture, written in the past fifteen years, exceeds the total for a century previous. A wider education is being spread, and the gain in every way is enormous.

A man who owns his home is a better citizen, even if there is a mortgage on it. There is feeling of personal partnership in the protection of property and the preservation of public order which makes him stand for what is best in law and government. It is the best possible thing for his wife and children; best for him and best for the country.-Leslie's Weekly.

Killed by His Collar.

High standing collars are now exclusively in vogue. The laws of health, however, require that the neck should be left bare, or nearly so, and unrestrained in its movements. Hence the collar should be loose and turndown. More than one case has been the professor's companion discharged recorded in which tight collars have being revived with difficulty. Some two years ago, on the arrival of the train from Nice at Paris, a rich American traveler was found dead in one of the compartments-strangled, as the inquest disclosed, by his high collar, whose button had left its mark upon his skin. Nor is this at all an unlikely accident, since there is a point in the throat close to the "Adam's apple," pressure upon which will stop respiration at once, and bring about asphyxia. Moreover, a collar which hardly feels uncomfortable while the wearer is standing may draw much tighter when he sits down, and should he fall asleep in it, may produce congestion, coma and a fatal termination.—The Ledger.

Curcs

of scrofula, eczema, boils, sores, eruptions, etc., prove the claims made for Ayer's Sarsaparilla as the best of blood purifying medicines. And it's cures that count. The story of these cures told by the cured is convincing. We send the book free. Address Dr. Ayer, Lowell, Mass.

The Trans

Securing Early Lettuce.

if sown now any of the lettuce will however, is effective in only a mild come up this fall. A few leaves scatgrow with the first warm weather in spring. Almost every one has seen self-sown lettuce on the beds where it was grown and went to seed the previous year. It is much more forward than spring-sown lettuce can be had in the same locality.

Wind Pump For Irrigation.

The wind pump, which many farmers now use to supply water for their stock, could be used successfully for irrigation without much expense or the small streams of running water might be gathered in reservoirs and utilized for the lower grounds. The gardiners and small fruit growers now ise these methods with great success and raise four or five times as much food on their few acres as they could do without their constant supply of water. This intense farming with means for irrigation must spread from the suburban regions where it is now practiced over wider regions through the country until irrigation in times of drought shall become common among the farmers.

Raspberries.

Read before the Missouri Horticultural Society, by D. A. Turner: Raspberries should be planted 8x4 feet apart, plant as early in the spring as the ground will work well or a good plan is to let the plants get from five to eight inches high and you will be sure to have a stand.

Cultivation should be thorough and shallow, I use Plant Junior five shovel plow and a two (2) horse cultivator and cultivate every eight to ten days from the time the plants are set to August 20, and hoe every other plowing; no weeds or grass allowed to

Pruning the first year, pinch back when sixty-one to twenty inches high, it will make them more stocky and will throw out laterals the second year, pinch back when two to three feet high. I never take out the old wood till spring, for it is protection to the new bones, shorten in the lateral shoots from ten to eighteen inches in early spring varities.

I have been growing raspberries for twenty years and now place the Kansas at the head, it stands the winter better and resists "Anthrognose" better than any I know of. It is very near as large as the Gregg and much better in quality and second early and makes fine, large tips and fine bones. The Progress is the best early var-

iety here, fine and large and makes a better bone than the Tolmer and does well on the sandy clay land. The Queen of the West is a good

one, and makes the largest cane of any other variety except the Shoffer noint about red varieties I will say nothing about, for they have not been a success with me, I have a number of varieties now.

The Pig-Eating Sow. In answer to the question; "Why will a sow sometimes destroy and eat her young pigs?" the Western Swineherd says: "There may be several different causes for this trouble.

"In some cases we have seen a sow evidently suffering from a form of hysteria, similar to what is known as puerperal mania in the medical proession, and in such cases the trouble has been very much aggravated, generally, by injudicious handling. If a sow is inclined to be wild and nervous as the time for parturition approaches, the best plan is to leave her alone. Do not go into her pen at all; it will only aggravate her. Handle your sows as much as possible while young, and nine times out of ten you will have no trouble at farrowing time; but if you have, make it a rule not to interfere unless absolutely obliged to, and on no account allow a stranger to go near the pen.

"In other cases we have been satisfied that the sow was induced to eat her pigs through an unnatural craving produced by an unhealthy condition of the body. Once acquired, the practice soon becomes habitual, and under these circumstances the best place for the sow is the fattening pen.

"We think, however, that careful handling, no harsh treatment, and a moderate amount of food of a cooling and slightly laxative description with a regular allowance of salt and ashes, and, perhaps, in some cases, a dose of salts shortly before farrowing time will be the best safeguard against such trouble.

"We notice a statement by a writer in one of our exchanges attributing the cause of this trouble to thirst, and recommending a plentiful supply of warm water to be produced for the sow after farrowing. We quite agree with the advisability of this, and will add that every sow, whether inclined to destroy her pigs or not, should have plenty of fresh, warm water within her reach after farrowing."

Our own opinion, backed by some of the best breeders, is that the feeding of cooling, laxative food before farrowing is the best preventive.-Farm, Field and Fireside.

Winter Feeding of Live Stock.

It would be better where there is a rapid growth, if possible, to withhold the stock from blue grass until midwinter. The advance in grain values has induced most farmers with live stock to put up liberal quantities of corn fodder. This will prove a fortunate reserve for the shortage in autumn grass. The abundant rains of early summer supplied a good yield of hay, as a rule. The hay market now is low compared with grain values. There seems to be no occasion for alarm as to a great advance in the values of stock food within the coming

six months. The feeder should give full atten-tion to the subject of the proper diet The price paid was \$5.50.

for his stock in winter. All provender The outdoor crop of spring lettuce that is put up in a rare condition, as nay be made several days earlier by sowing the seed in some sheltered of domestic animals as bran, oil-meal place late in fall. It is not likely that and other laxatives. The provender,

tered over the bed will keep the seed ties. On the other hand, ripe hay, from injury, and it will sprout and straw and corn fodder to a degree have the opposite qualities, tending to constipation. In putting up the hay, many farmers make it a rule to neutralize the extreme tendencies in their hay by liberal quantities of salt distributed in

> curing. Ordinarily the watchful f. .er provides a liberal supply of salt and wood ashes mixed, or, in the absence of wood, the ashes of corn cobs are used. This condiment is regarded as efficacious in maintaining an equilibrium in digestion. At the present time, very copious rains have revived the grazing. Lime should also be furnished as a part of the con-

diment for the grazing animals. One who provides ensilage or a good supply of roots will have little trouble in regulating the digestion of domestic animals after a rule of diet has been established by preliminary experiments.

The skillful feeder will be able to regulate the diet of the animals by a judicious mixture of the grains and forage, requiring only a limited amount of bone nutriment in the way of mineral condiments. In the case of oats that are ripe, a mixture of an equal bulk of wheat bran is at times desirable where the hay or straw is over-ripe.

Economy in the use of food may be exercised according as the weather is mild or severe. The amount of grain may be diminished with mild weather, but must on the other hand be in creased with a change to severe weather. In the case of animals fattening to a finish, it is better they should be fed slightly less than they will eat, than to be furnished an oversupply. The same suggestion applies to all feeding, but there is little danger, as a rule, of the average feeder exceeding the proper limit in the case of young stock.

The young things that are weaned about this time of the season will need very especial care. Where their grain food has been gradually increased before they were taken from their dams, there will be little trouble. Where sudden removals have been made, it is well, if possible, that the youngsters should be furnished cow's milk diluted with water, along with grain rations, for a few weeks, gradually diminishing the amount of milk. When one has a good number of young things, it is well to furnish them warm cooked food at least once a day. The same suggestion applies to milch cows. When the ice gathers, water should

be warmed for all the stock. Vigilant care will have abundant reward.-Farm, Field and Fireside.

Farm and Garden Notes.

Keep the wagon well greased. Burn up the brush on the place. Keep the fodder tied up close to the husking.

Cut and burn all weeds before the eeds shell out. Success in farming depends much

apon preventing waste. Better get the turnips and mangles harvested without delay.

Grain feeding of cows in summer helps the fertility of the soil. Every grain bag ought to be marked in plain letters with ink or paint.

Fresh top-dressing of pastures is an insult to stock if it is turned on them. Wheat cannot sprout well in lumpy soil. Pulverize and roll the wheatland

A new variety not suitable to your soil and climate is worse than an old, inferior variety that is.

It is a waste of land to give it only half the cultivation it needs; it is a waste of time to spend it half-doing a "Mary had a little lamb," and her

father sold it, but the money he got for it did not pay for the injustice he did the child. If you use poles for running beans, will it not pay to pull them as soon as the beans are harvested, and store

them under cover? What do you think of the plan of drawing in some of the fodder and

stacking it before finishing the husking? Would it not be a good plan? Are the hay-rake, mower and loader in the meadow? If so we suggest that you harness the team, go and get

them, and put them under cover somewhere. If the corn you intend to cut as fodder gets caught with a light frost all hands turn out as early in the morning as practical and cut as much as possi-

with that in the low places. Nothing is better established in agriculture than the value of a proper rotation of crops. Do not raise a crop of corn or a crop of wheat five, ten or fifteen years in succession on the same piece of land, and then wonder why

ble before the sun cooks it, beginning

you set a small yield. If you find it hard to get the manure out in time to plow the fields, take it out as often as a load accumulates, if it is every day. It is better by far that the manure rots and leaches upon the field than it wastes by leaching in the barn-yard and loses it strength in the wayside ditch.

If your tools and implements are scattered about the barn, the orchard and the fields, take an hour or so and get them all under cover in one place, and see how much better you will feel to know that they are where you can find them when wanted, and that they are not having the life beaten out of them by storms and sunshine.

Negotiations extending over three years were necessary before a Michigan, man could buy two Islands, comprising five acres, from the Government.

POPULAR SCIENCE.

The common house fly makes 600 strokes of its wings per second when flying at its highest speed, The dragon fly makes 11,500.

The most wonderful astronomical photograph in the world, is that which has recently been prepared by Lon-don, Berlin and Parisian astronomers. It shows at least 68,000,000 stars.

The only electric traction adapted for crowded city streets is the Vuilleumier system, Professor Silvanus P. Thompson contends, supplying current through contacts in the road's surface. An Illinois man has patented a hoe

which has a divided shank at the end of the handle to support two narrow blades, the device being useful in weeding both sides of small plants at once without interfering with the Steel bushel baskets are pressed from one piece of thin cold-rolled

sheet steel entirely without seams and well galvanized. They will not leak, and can be used for all purposes for which an ordinary splint basket is adapted. In a handy combination tool just placed on the market, the metallic handle is divided into two sections to

operate a pair of pliers, claws and wire cutter, with a hatchet blade on

one head and a hammer head and claw on the opposite head. Animals are often able to bear very protracted fasting. In the Italian earthquakes of 1795 two hogs were buried at Soriano in the ruins of a building. They were taken out alive forty-two days later, but very lean and weak. A dog at he same time and place was buried for twenty-three

days and recovered. An eminent naturalist says that every thread of what we call the spider's web is made up of about 5000 separate fibers. If a pound of this thread were required it would occupy nearly 28,000 spiders a full year to furnish it. The author of this statement does not inform us how long the thread would be, but it is safe to say that it would reach several times around the world.

Two companies, one French and the other British, carry on the extensive manganese mines on the Cyclades, Greece. The beds exist in parallel layers in a hill rising abrubtly from the shore to a height of about 400 feet. Eighteen tunnels, from 100 to 400 feet long, have been opened in the beds, with veins of from two to six feet of ore, which is intermixed with clay. The separation of ore from clay is very easy and inexpensive.

Ants That Live on Honey. Twelve million dairymen ants have been discovered on the western border of Chester County, Pennsylvania. The entire colony lives in a ten-acre lot on the Phillips estate, near Atglen.

These curious little creatures gain a livelihood by securing the honey of the aphides, tiny insects which live on rose bushes and grapevines. When disturbed they yield a single drop (of honey. This the dairyman ant knows, and so he pats and fairly embraces the aphide. At once the honey appears, which the ant consumes as greedily as a child devours candy. He continues to disturb the frightened aphide until its store of honey is exhausted, when he seeks, if his appetite is not satisfied, another living honey storehouse.

The homes of these ants are mounds ten feet high. They are curious little fellows. The head and the chest are a bright red, but the abdomen is black. Otherwise they much resemble the ordinary big black ants found in gardens in this city. Each mound contains several castes. There is, first of all, the ant aristocracy, made up of the male and female ants. They have wings and are about six-

sixteenths of an inch long.

They work not, neither do they spin. It is their exclusive task to raise the young. Next in rank are the worker-majors. These are a sixteenth inch shorter than the males and females and are without wings .-New York Journal.

A New Departure in Glassmaking.

Molten glass has long been molded into a great variety of ware, but the blowpipe driven by air from a man's lungs has been deemed indispensable for shaping jars and other hollow articles, as well as window glass. A great invention bids fair to deprive the glassblower of his vocation, just as many time-honored craftsmen in the iron trade have found their occupations gone. The first use of the new glassmaking machines is in the manufacture of fruit jars at Muncie, Indiana. One blowing machine is said to do away with the services of three men, and it is estimated that the same product can be turned out with only two-thirds as many workmen employed. The introduction of these machines in glassmaking is regarded as fully as revolutionary in that trade as was the introduction of the Bessemer converter and the open hearth furnace in the iron trade, or the typesetting machine, self-binding harvester, etc., in their respective fields-Railway Review.

When naming a plant in honor of some man liberties are frequently taken with the orthography, and very often the person chosen is more honored in the name than by anything special that he did to deserve it. The celebrated French botanist, Baillou, had the naming of a plant from the island of Juan Fernandez, that had never before been named or described. From that island he had naturally the story of Robinson Crusoe in mind, and he thought, to honor Crusoe's man Friday, he would give this plant his name; but he did not call it Fridaya, but translated it into the French name for Friday-that is to say, the sixth day of the week, Vendredi, and the plant is described in the books as Vendredia. No one would ever suspect from this name that it was intended to honor Robinson Crusoe's sole companion on the desolate island. -Meehan's Monthly.

Naming Plants.

South African Diamonds.

It is estimated that over eighty tons of diamonds have been unearthed in the South African fields during the last eighteen years. These represent a total value of \$280,000,000.

Special forms of suffering lead many a woman to acquire the morphine habit. One of these forms of suffering is a dull, persistent pain in the side, accompanied by heat and throbbing. There is disinclination to work, because work only increases the pain.

This is only one symptom of a chain of troubles; she has others she cannot bear to confide to her physician, for fear of an examination, the terror of all sensitive, modest women.

The physician, meantime, knows her condition, but cannot combat her shrinking terror. He yields to her supplication for something to relieve the pain. He gives her a few morphine tablets, with very grave caution as to their use. Foolish woman! She thinks morphine will help her right along; she becomes its slave !

A wise and a generous physician had such a case: he told his patient he could do nothing for her, as she was too nervous to undergo an examination. In despair, she went to visit a friend. She said to her, "Don't give yourself up; just go to the nearest druggist's and buy a bottle of Mrs. Lydia E. Pinkham's Vegetable Compound. It will build you up. You will begin to feel better with the first bottle." She did so, and after the fifth bottle her health was re-established. Here is her own

get around the bouse, could not do any work without feel-ing tired out. My monthly periods had stopped and I was so tired and nervous all of the time. I was troubled very much with falling of the womb and bearing-down pains. A friend advised me to take Lydia E. Pinkham's Vegetable Compound; I have taken five bottles, and think it is the best medicine I ever used. Now I can work, and feel like myself. I used to be troubled greatly with my head, but I have had no bad headaches or paint-

tation of the heart, womb trouble or bearing down pains, since I commenced to take Mrs. Pinkham's medicine. I gladly recommend the Vegetable Compound to every suffering woman. The use of one pound to every suffering woman. The use of one bottle will prove what it can do."-Mrs. Lucy Prastry. Derby Center, Vt. OREAT BARGAINS IN FARMS.

By reason of ill-health, a large land owner is selling off some most valuable farms in Maryland and Virginia, at prices which must prove a strong inducement to those seeking country homes, or looking for sure and profitable investments. Among the holdings are the following choice properties:

A farm of 786 sores, near Richmond. Va., one of the finest in the state. Highest condition of cultivation and amply supplied with first-class buildings, stc..etc.

The Old Bassett Farm, 660 acres, near Richmond, on the Pamunkey River, a magnificent old homested and one of the finest properties in Virginia.

A finely located farm of 900 acres, on the Bevern River, 4 miles from Aunapolis, the capital of Md.

Address the Owner, OHARLES TYLESH, 1015 Madison Avenue, BALTINGER, MD.

RADWAY'S PILLS,

Purely vegetable, mild and reliable. Cause Perfect Digestion, complete absorption and healthful regularity. For the cure of all disorders of the Stomach, Liver, Bowels, Kidneys, Bladder, Nervous Diseases.

LOSS OF APPETITE, SICK HEADACHE, INDIGESTION, DIZZY FEELINGS, FEMALE COMPLAINTS, BILIOUSNESS, DYSPEPSIA,

PERFECT DIGESTION will be accomplished by taking Radway's Pills. By their ANTI-BILIOUS properties they stimulate the liver in the secretion of the bile and its discharge through the biliary ducts. These Pills in doses from two to four will quickly regulate the section of the liver and free the patient from these disorders. One or two of Radway's Pills, taken daily by those subject to billous pains and torpidity of the liver, will keep the system regular and secure healthy digestion. Price, 25 cts. per Box. Sold by all druggists, or sent by mail on receipt of price.
